**PRE-REQUISITE :**

Knowledge of Cloud Computing Foundations & Cloud Native Application Development

**COURSE OBJECTIVES :**

CS463.CEO.1: To study SDLC Automation Process

CS463.CEO.2: To learn advanced facilities available for launching infrastructure with CloudFormation

CS463.CEO.3: To understand the container services available in AWS

CS463.CEO.4: To learn the policies and standards used in service automation of OS.

CS463.CEO.5: To develop the plan for High Availability and Disaster Recovery

**COURSE OUTCOMES :**

The students after completion of the course will be able to,

CS341.CO.1: To develop the automated the SDLC Process

CS341.CO.2: To summarize the various advanced facilities available to launch infrastructure using CloudFormation

CS341.CO.3: To differentiate between AWS Elastic Container Service, AWS Fargate and AWS Elastic Kubernetes Service

CS341.CO.4: To implement the various policies and standards required for automation

CS341.CO.5: To design the systems with detailed plan for High Availability and Disaster Recovery

CS341.CO.6: To develop a infrastructure using Jenkins

| THEORY COURSE CONTENT   |   |         |
|---|---|---------|
| UNIT 1  | SDLC Automation                                   | 8 HOURS |
| <p><b>App/System/Case study:</b> Web Application Development using CICD Pipeline</p> <p><b>Contents:</b> CICD Overview, CodeCommit - Overview, options, securing repository and branches, Triggers and notifications.</p> <p>CodeBuild - Overview, buildspec.yaml, Docker, ECR using buildspec.yaml, Environment variables and Parameter Store, Artifacts and S3, Events and Logging</p> <p>CodeDeploy - Overview, Application Deployment Groups, Deployment configurations, Hooks and Environment Variables, Rollbacks, Deploy to AWS Lambda</p> <p>CodePipeline - Overview, Adding CodeCommit, CodeDeploy and CodeBuild, Manual approval steps, Stage Actions, All Intergartions</p> <p><b>Self -Study:</b> Jenkins Architecture</p> <p><b>Further Reading:</b> AWS Plugins for Jenkins</p> |   |         |
| UNIT 2  | Advanced Configuration Management                 | 6 HOURS |
| <p><b>App/System/Case study:</b> Launching infrastructure for executing a Web Application</p> <p><b>Contents:</b> Advanced CloudFormation - User Data, cfn-init, cfn-signal and wait conditions, Rollbacks, Nested Tasks, Change Sets, Deletion Policy, Deploying Lambda Functions, Drift Detection</p> <p>Advanced Elastic Beanstalk - Saved configurations, .ebextensions for config and resources, Rolling updates strategies, Swap URL, Worker environments</p> <p>Advanced Lambda - Security, Environment variables, KMS and SSM, Versions, Aliases and Canary routing, SAM Framework</p> <p><b>Self-Study:</b> EBS Multi Docker Deployment</p> <p><b>Further Reading:</b> Lambda CodeDeploy</p>   |   |         |
| UNIT 3  | Elastic Container and Elastic Kubernetes Services | 6 HOURS |
| <p><b>App/System/Case study:</b> Deploying a Web Application using Containers</p> <p><b>Contents:</b> What is Docker, ECS Clusters, ECS Task Definition, ECR, Fargate, Elastic Kubernetes - Overview, deployment</p> <p><b>Self-study:</b> ECS Autoscaling</p> <p><b>Further Reading:</b> ECS CloudWatch Integration</p>  |   |         |
| UNIT 4  | Policies and Standards Automation                 | 6 HOURS |
| <p><b>App/System/Case study:</b> Developing policies and standards for Monitoring and Logging of a Web Application</p> <p><b>Contents:</b> SSM - Overview, EC2 steup, On Premise Setup, Resource Groups, Run Command, Parameter Store, Patch Manager, Inventory, Automation Config - Rules, Automation, Multi Account Inspector - Setup and Automation Trusted Advisor, GuardDuty, Secrets Manager</p> <p><b>Self- Study:</b> AWS Maccie</p> <p><b>Further Reading:</b> EC2 Instance Compliance</p>   |   |         |

|  |  |                |
|--|--|----------------|
| <b>UNIT 5</b>  | <b>High Availability, Fault Tolerance, Disaster Recovery</b> | <b>6 HOURS</b> |
| <p><b>App/System/Case study:</b> Developing High Availability, Fault Tolerance features for a Web Application</p> <p><b>Contents:</b> AutoScaling Groups - Scheduled Actions, Scaling Policies, ALB Integration, Lifecycle Hooks, Termination Policies, Integration with SQS, CodeDeploy Integration, Deployment Strategies Multi AZ and Multi Region - Overview, CloudFormation StackSets, CodePipeline Disaster Recovery - Overview, Strategies</p> <p><b>Self- Study:</b> AWS Organizations</p> <p><b>Further Reading:</b> HTTPS on ALB</p> |  |                |
| <b>UNIT 6</b>  | <b>Terraform</b>   | <b>8 HOURS</b> |
| <p><b>App/System/Case study:</b> Launching the infrastructure to run a Web Application using Terraform</p> <p><b>Contents::</b> Jenkins - Overview, Installation and basic configuration, creating and running first job, adding and managing slaves, Building triggers, Continuous Integration, Using AWS functionality</p> <p><b>Self -Study:</b> Difference between Terraform and AWS CloudFormation</p> <p><b>Further reading:</b> Using AWS Services through Terraform</p>  |  |                |
